

## How SignNow Helped BIND Therapeutics Obtain eSignatures While Complying With CFR Part 11

### Summary

Bind Therapeutics is a clinical-stage nanomedicine platform company developing a new class of targeted and programmable therapeutics.

### Challenges

- Many time-sensitive documents needed immediate approval
- Needed to obtain signatures while mobile
- Needed a way to sign documents while working remotely

### Solution

SignNow

### Results

- Improved turnaround time, especially during travel
- Eliminated the need for access to a printer and scanner
- Helps keep track of documents that are still pending signatures

### About BIND Therapeutics

BIND has a vision of revolutionizing the treatment of life-threatening diseases through the application of nanotechnology. A clinical-stage nanomedicine platform company, BIND is capitalizing on the enormous opportunity to improve currently-marketed drugs.

### The Challenge

BIND Therapeutics conducts clinical trials, which usually necessitates constant approvals of documents to ensure compliance with various regulatory requirements. These approvals are often time-sensitive, so printing, scanning, and faxing are very inefficient methods of getting documents signed.

BIND team members are often traveling, so requiring them to be physically present to sign documents can cause huge delays. And given the number of documents that require signatures, using paper copies is not the most environmentally friendly option. One final requirement was that the eSignature solution fulfill BIND's requirement to be CFR Part 11 compliant.

### How SignNow Helped

SignNow helps BIND facilitate the signature process for their documents. It removes the barrier of having to be physically present in order to sign. BIND team members travel a lot and using SignNow guarantees that no document is too difficult to sign, even while on the road.

*We assessed SignNow's CFR Part 11 compliance and found that SignNow has appropriate controls in place to manage the eSignature tool for its intended use, and has a sufficient working knowledge of the compliance requirements.*

### About SignNow

SignNow cuts document turnaround time by as much as 90%. SignNow gives you control over your document workflows and lets you easily integrate signed documents with other electronic systems. Get legally binding signatures from your customers, partners and employees in seconds using any device. With SignNow, you never need to search for a paper agreement again since your documents are stored securely in the cloud. SignNow also offers on-premises and Vx solutions.

Another barrier that SignNow eliminates is the need to access printers, scanners, and fax machines. Documents are securely signed from any computer's web browser and can even be signed from a mobile device. There is no danger of signing in the wrong spot or neglecting to fill something in because BIND adds fields to their documents.

SignNow also helps to ensure that documents are accurate and correct. If there are errors in the documents, it's easy to correct, then have them re-signed via SignNow. Keeping track of documents that are still pending is easy with SignNow, and notification emails are sent when the document has been signed.

Overall, SignNow has greatly improved BIND's turnaround time, enabling them to focus on conducting clinical trials rather than chasing down signatures. BIND can rest assured that their documents are securely signed and stored with SignNow.

*We found SignNow to be user-friendly and quite intuitive. You could send the document for signature then leave the office knowing that SignNow will automatically email you the fully signed document once it's completed.*
